TITLE:	UPDATE ON MPOX (MPX) IN NIGERIA
SERIAL NUMBER:	31
EPI-WEEK:	31
DATE:	August 6, 2023

Table 1 – Key Indicators

Reporting Year	Reporting week	Suspected cases	Confirmed cases	Deaths (Confirmed cases)	Case Fatality Ratio (CFR)	States Affected (Confirmed cases)	LGAs Affected (Confirmed cases)
2023 Current	Week 31	11	0	0	0.0	0	0
2023 Cumulative	Week 31	882	80	2	2.5	19 +FCT	52
2022 Cumulative	Week 31	474	172	4	2.3	28 + FCT	118

Highlights

- In week 31, the number of new suspected cases is 11, compared with 23 cases reported in week 30, 2023. These were reported from six (6) States – Ogun (5), Abia (1), Bayelsa (1), Lagos (1), Plateau (1), Cross River (1) and Kwara (1) across 11 Local Government Areas.
- Since week 1 of 2023, eighteen (18) States and FCT have recorded at least one confirmed Mpox case across fifty-two (52) Local Government Areas. In 2023, the States with the highest burden are Lagos (27.8%), Ogun (19.0%), Abia (7.6%), Imo (6.3%) and Edo (5.1%), contributing 66.7% of confirmed cases.
- The number of confirmed cases is zero (0) in week 31, 2023, same as zero (0) confirmed cases reported in week 30, 2023.
- No death was recorded in week 31, with a CFR of 0.0% same as CFR of 0.0% that was reported in week 30, 2023.
- Overall, since the re-emergence of Mpox in September 2017, 3490 suspected cases have been reported from 36 States and FCT in the country. Of these 3490 suspected cases, 1068 (30.6%) were confirmed (with males predominantly affected) from 34 States and FCT. seventeen (17) deaths have been recorded since the re-emergence in 2017.
- The National Mpox multi-partner, multi-sectoral Technical Working Group (TWG) continues to coordinate the response activities at all levels.

	Grand Total	88	49	47	8	34	762	80	1068

Response activities

Pillar	Activities to date	Next steps
Coordination	<ul style="list-style-type: none"> Facilitating the smooth running of the weekly Mpox technical working group meetings Providing offsite subnational support to resolve issues in reporting States 	<ul style="list-style-type: none"> Follow-up implementation of the approved Incident Action plan activities in collaboration with other pillars
Surveillance	<ul style="list-style-type: none"> Eleven (11) suspected Mpox cases were reported from 4 States No confirmed cases were recorded 	<ul style="list-style-type: none"> Continue to support all State Surveillance teams to ensure on SORMAS
Laboratory	<ul style="list-style-type: none"> The sample positivity rate for Mpox is 0% and 82% for Varicella-Zoster Virus (VZV) 90% of samples met the target overall turnaround time (time sample was collected from the States to the time when the result was shared with the States) 	<ul style="list-style-type: none"> Continue to support effective sample management and transportation to the NRL from health facilities across the country

Notes on this report

Data Source

Information for this disease was case-based data retrieved from the National Mpox Emergency Operations Centre.

Case definitions

Suspected case

- An acute illness with fever $>38.3^{\circ}\text{C}$, intense headache, lymphadenopathy, back pain, myalgia, and intense asthenia followed one to three days later by a progressively developing rash often beginning on the face (most dense) and then spreading elsewhere on the body, including soles of feet and palms of the hand.

Probable case

- A case that meets the clinical case definition is not laboratory-confirmed but has an epidemiological link to a confirmed case.

Confirmed case.

- A clinically compatible case that is laboratory confirmed

Contact

- Any person who has been in direct or indirect contact with a confirmed case since the onset of symptoms, i.e., contact with skin lesions, oral secretions, urine, faeces, vomitus, blood, sexual contact, sharing a common space (anyone who has been in proximity with or without physical contact with a confirmed case)

Calculations

- Case Fatality Rate (CFR) for this disease is reported for confirmed cases only.
